

Description

Yellow plastic sheet coated on both sides with a special “dry touch” adhesive that sticks to bugs, not to your hands. Peel-off backing on both sides. Commonly used for whitefly control in greenhouses and plantscapes, also attracts thrips, gnats, leaf miners, aphids, beetles, and some smaller flies.

Format

- 2050217 - Yellow Dry touch trap (40 X 24,5 cm) - 10/pack

Application

The Yellow Dry Touch Trap is a general purpose trap for the detection of a wide variety of insects. Place traps in the upper 1/2 of the canopy. Maintain an open space around the trap so both sides of the trap are functional. Replace the trap every 2 weeks or when the sticky surfaces are excessively dirty.

Reduce the number of trap or stop trapping if the insect pest is no longer present or if there is a majority of beneficial insects captured.

Introduction rate

Introduction	Quantity	Surface	Frequency	Duration
Inside production with flying biological control agent	1 trap	per 100 plants	Replace when they no longer stick	as needed
Monitoring outside production	1 trap	per 2000 ft ²	Replace when they no longer stick	as needed
Massive trapping outside production	1 trap	per 400 ft ²	Replace when they no longer stick	as needed
